

Project Introduction

The Online Event Management System is a **web-based application** developed to simplify the process **of organizing, managing, and booking events**.

Traditional event management involves manual processes such as **maintaining registers, handling bookings offline**, and managing event details separately, which can be time-consuming and error-prone.

This project aims to provide a centralized digital platform where users **can view available events, book events online**, and administrators can efficiently **manage events, users, and bookings** through an interactive dashboard.

Objective of the Project

- To provide an **easy and user-friendly platform** for event booking
- To allow administrators to **manage events and users efficiently**
- To **reduce manual work and paperwork**
- **To store and manage event data securely** using a database
- To understand **modern web development using React**

Scope of the Project

- User registration and login
- Viewing upcoming events
- Booking events online
- Admin management of events and bookings
- Secure storage of data using MongoDB

Features of the System

- Single Page Application (SPA) using React
- User-friendly interface
- Secure and structured data storage
- Real-time event listing
- Easy event booking process

Advantages of the System

- Reduces manual effort
- Faster event management process
- Easy accessibility from anywhere
- Scalable and maintainable architecture
- Industry-relevant technology stack

Future Scope of the System

- Advanced bank / Credit Card / Debit Card Payment Integration
- Refund and Cancellation System
- Email and SMS Notifications
- Mobile Application Support
- Multi-Language Support
