

EVENT MANAGEMENT SYSTEM

“Memento”

Submitted By :

Mihir Vaidya (202504104610024)

Vivek Gosai (202504104610023)

Chirag Modi (202504104610142)

Viraj Patel (202504104610086)

Guided By:

Ms. Shivani Talaviya

For partial fulfilment of the requirements

For the Degree of Master of Computer Application,

Shrimad Rajchandra Institute of Management and Computer Application

Uka Tarsadia University

Feb , 2026

DECLARATION

We hereby declare that the project titled **Event Management System** is fully implemented by us. It is neither paid nor copied. Even though, later on, in case of any infringement found for this project work, we are solely responsible for the same and understand that as per UGC norms, the University can revoke the degree conferred to us.

Enrollment No	Students Name	Signature
202504104610024	Mihir Vaidya	
202504104610023	Vivek Gosai	
202504104610142	Chirag Modi	
202504104610086	Viraj Patel	

As a guide, I assure you that there is no plagiarism found in the submitted document.

Guide Name: Ms. Shivani Talaviya

Date: Place: SRIMCA ,UTU

Acknowledgement

It is my privilege to express my sincere gratitude to the individuals who helped me, directly or indirectly, in conducting this project work. I would like to thank Uka Tarsadia University for including this project work activity in the M.C.A. curriculum.

I am deeply grateful to our Director, **Dr. Dharmendra Bhatti**, and my project guide, **Ms. Shivani Talaviya** for providing the valuable guidance and suggestions necessary for the successful completion of this project. I am also indebted to all the respondents, whose cooperation made this project possible.

Finally, I extend my special thanks to every faculty member of **the Shrimad Rajchandra Institute of Management and Computer Application (SRIMCA)**, as well as my friends and family, for their constant support throughout this endeavour.

Chapter 1 : Introduction Of System

1.1 Problem Statement

Event planning and management is a complex process that requires coordination of various services such as venue booking, catering, decoration, and scheduling. Traditional event management methods rely on manual processes, phone calls, and physical booking systems, which are time-consuming, inefficient, and prone to errors.

There is a need for an automated system that allows users to explore event packages, view details, and book events easily from a single platform. The system should also manage user registration, event packages, and booking information efficiently.

The proposed **Event Management System (Momento)** provides a digital platform that simplifies event planning by offering event packages, booking functionality, and centralized management.

The proposed solution is a web-based Event Management System that provides:

- Online event browsing
- Event package selection
- User registration and login
- Package details viewing
- Event booking functionality
- Centralized database management

1.2 Solution for Problem Statement

The proposed solution is a web-based Event Management System that provides:

- Online event browsing
- Event package selection
- User registration and login
- Package details viewing
- Event booking functionality
- Centralized database management
- Make a custom Event

The system reduces manual work and provides a simple and efficient way to manage events.

1.3 Proposed Solution

The proposed system is a web-based platform that provides:

- Online event package browsing
- User authentication and registration
- Package details with images and catering information
- Event booking functionality
- Centralized data storage
- Secure backend services

The system reduces manual work and improves efficiency by digitizing the event management process.

1.4 Objectives of the System

The main objectives of the Event Management System are:

- To provide an online event booking platform
- To simplify event package selection
- To manage user accounts securely
- To maintain centralized database of events and users
- To provide easy access to event information

- To reduce manual workload in event planning
- To improve user experience using modern UI design

1.5 System Scope

The scope of the system includes:

- User registration and login
- Viewing event packages
- Viewing package details
- Event booking functionality
- Data storage in MongoDB database
- Backend API integration
- Authentication
- Verify Register User

Future Scope :

- Online payment integration
- Admin dashboard
- Email notifications
- Event scheduling management

1.6 System Limitations :

- No payment gateway integration
- No advanced admin panel
- Limited booking management
- No event cancellation feature
- No notification system
- No multi-user role management

1.7 Tools and Technologies Used

Frontend Technologies :

- **React.js** — Component-based UI development
- **HTML5** — Page structure
- **CSS3** — Styling and layout
- **JavaScript** — Dynamic functionality

Backend Technologies :

- **Node.js** — Server runtime environment
- **Express.js** — REST API framework

Database :

- **MongoDB** — NoSQL document-based database
- **Mongoose** — MongoDB object modeling

Development Tools :

- Visual Studio Code
- Thunder Client API testing
- GitHub version control

CHAPTER 2 — SYSTEM REQUIREMENTS

2.1 Functional Requirements

User Management

- User registration
- User login authentication
- Password encryption
- Session handling

Event Management

- View event packages
- View package details
- Display package images
- Display catering services

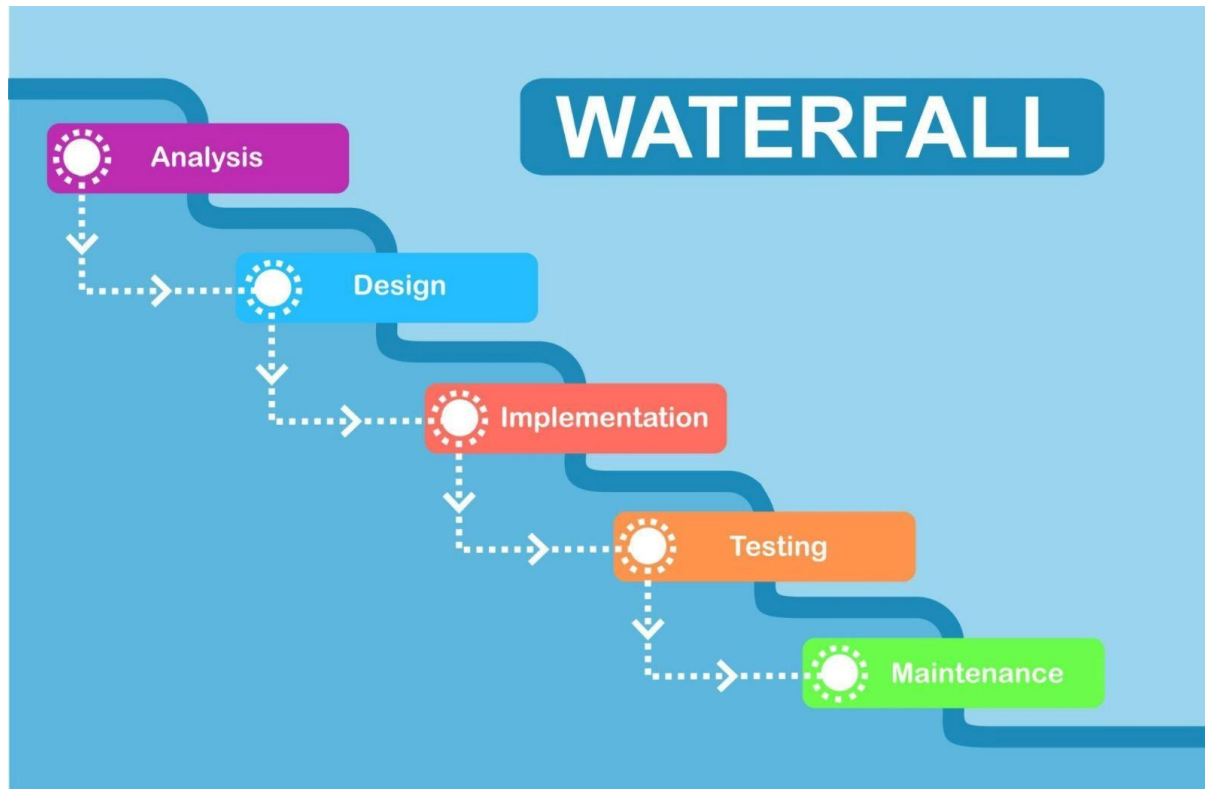

Booking Management

- Book selected event
- Store booking details
- Associate booking with user

Database Management

- Store user records
- Store Event Packages
- Retrieve Data dynamically

2.2 Data Model Description

The Waterfall Model is a linear and sequential software development process where each phase must be completed before moving to the next. This model is suitable for the Event Management System because the project requirements, system design, and expected functionalities were clearly defined before implementation.

The **Waterfall Model** is a linear and sequential software development process where each phase must be completed before moving to the next. This model is suitable for the Event Management System because the project requirements, system design, and expected functionalities were clearly defined before implementation.

Phases of Waterfall Model Applied in the Project

1. Requirement Analysis

In this phase, the requirements of the Event Management System were identified. The system needed to allow users to register, log in, view event packages, and book events. The administrator required functionality to manage events, packages, and users.

2. System Design

During the design phase, the overall structure of the system was planned. UML diagrams such as **Use Case Diagrams, Activity Diagrams, and Data Models** were created to represent the system architecture and interaction between components. The database structure was also designed using MongoDB collections.

3. Implementation

In this phase, the actual development of the system took place. The project was implemented using the **MERN stack (MongoDB, Express.js, React.js, Node.js)**. Frontend interfaces were developed using React, while backend APIs were implemented using Node.js and Express.js to handle authentication, package management, and booking operations.

4. Testing

After implementation, the system was tested to ensure all functionalities worked correctly. Testing included checking user authentication, booking validation, package display, and database operations to verify that the system behaved as expected.

5. Deployment and Maintenance

In the final phase, the application was executed and demonstrated as a complete working system. Any minor errors discovered during testing were corrected to improve system performance and reliability.

Conclusion

The **Waterfall Model** was selected for the Event Management System because it provides a structured development approach with clearly defined phases. Since the project requirements were well understood from the beginning and the scope remained stable throughout development, the Waterfall model helped in organizing the development process and maintaining proper documentation for the project

CHAPTER 3 — CONCEPTUAL DESIGN

3.1 Use Case Diagram

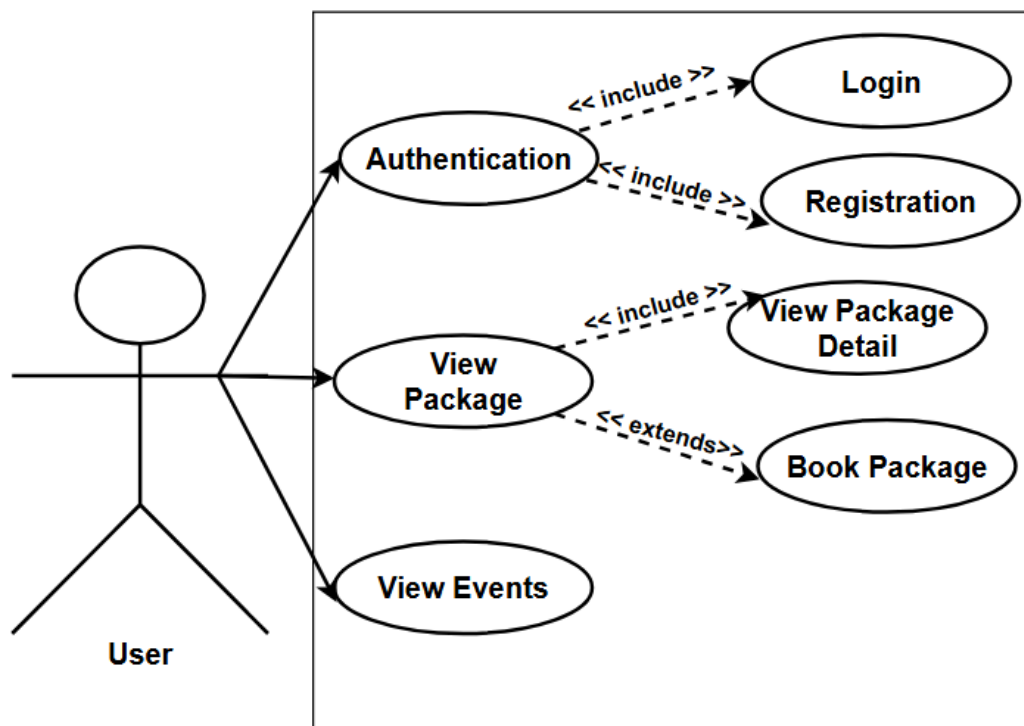

Actors :

3.1.1 User (Booking Package)

3.1.2 User (Custom event Booking)

3.1.3 Admin

3.1.1 User

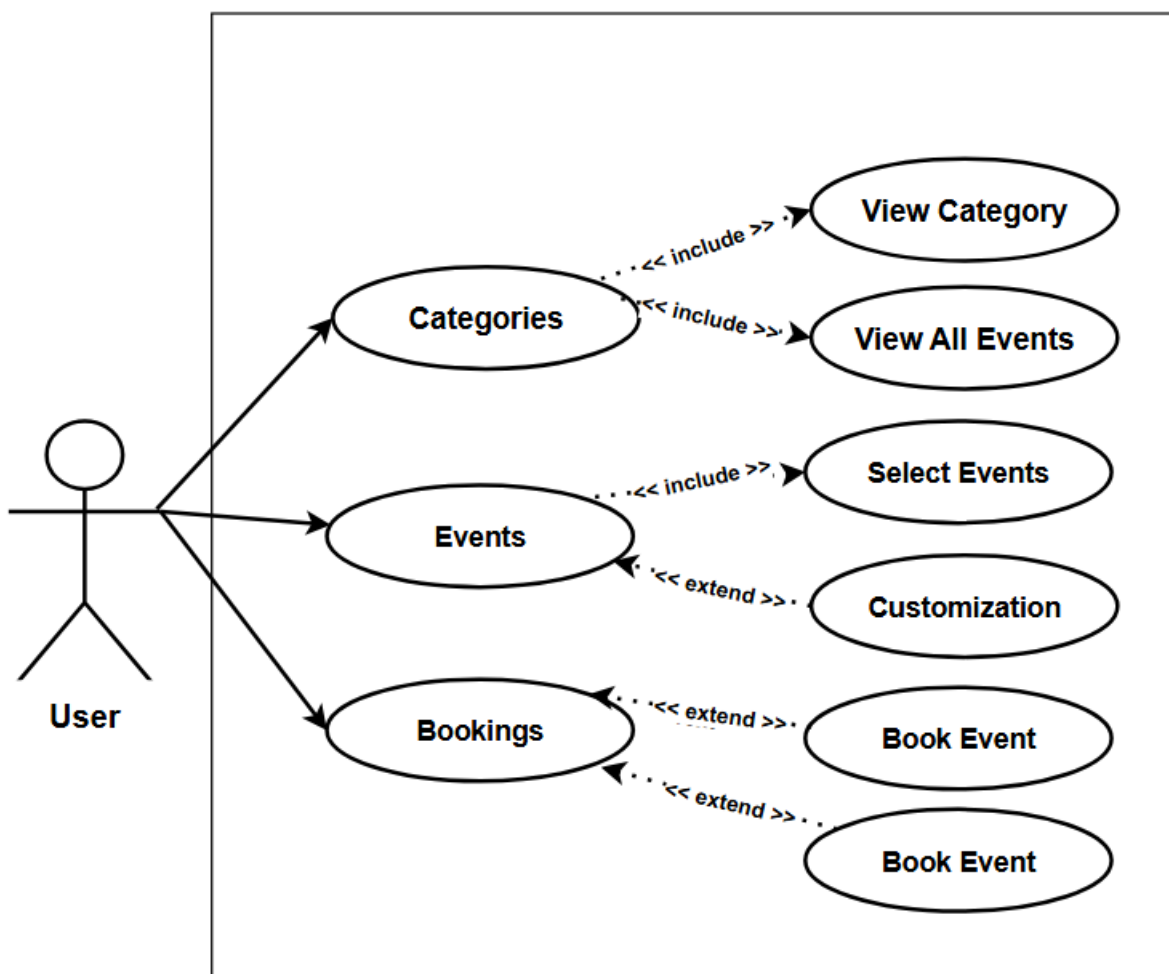

- User can Login but first he have to register through Registration Page
- User can View Packages .
- User also view Event that are recently organized by Momentoe.

3.1.2 User (Custom event Booking)

<<include>> : Use <<include>> when a use case **always performs another use case as part of its process**.

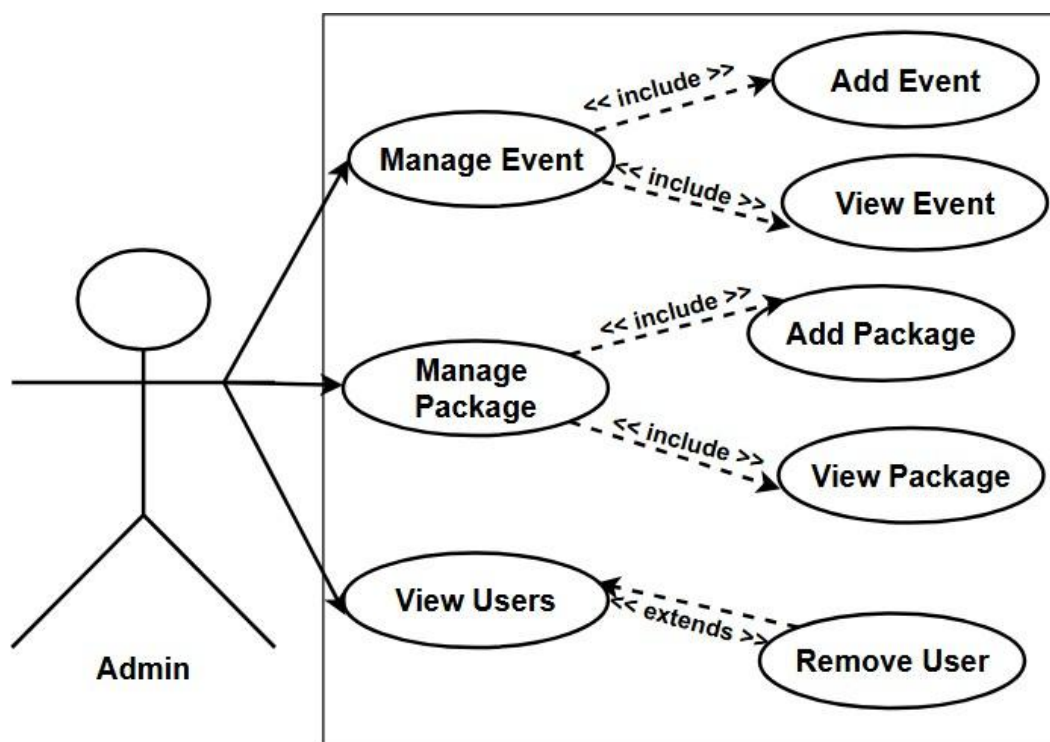

<<extends>> : Use <<include>> when a use case **always performs another use case as part of its process**.

3.1.3 Admin :

<<include>> : Use <<include>> when a use case **always performs another use case as part of its process.**

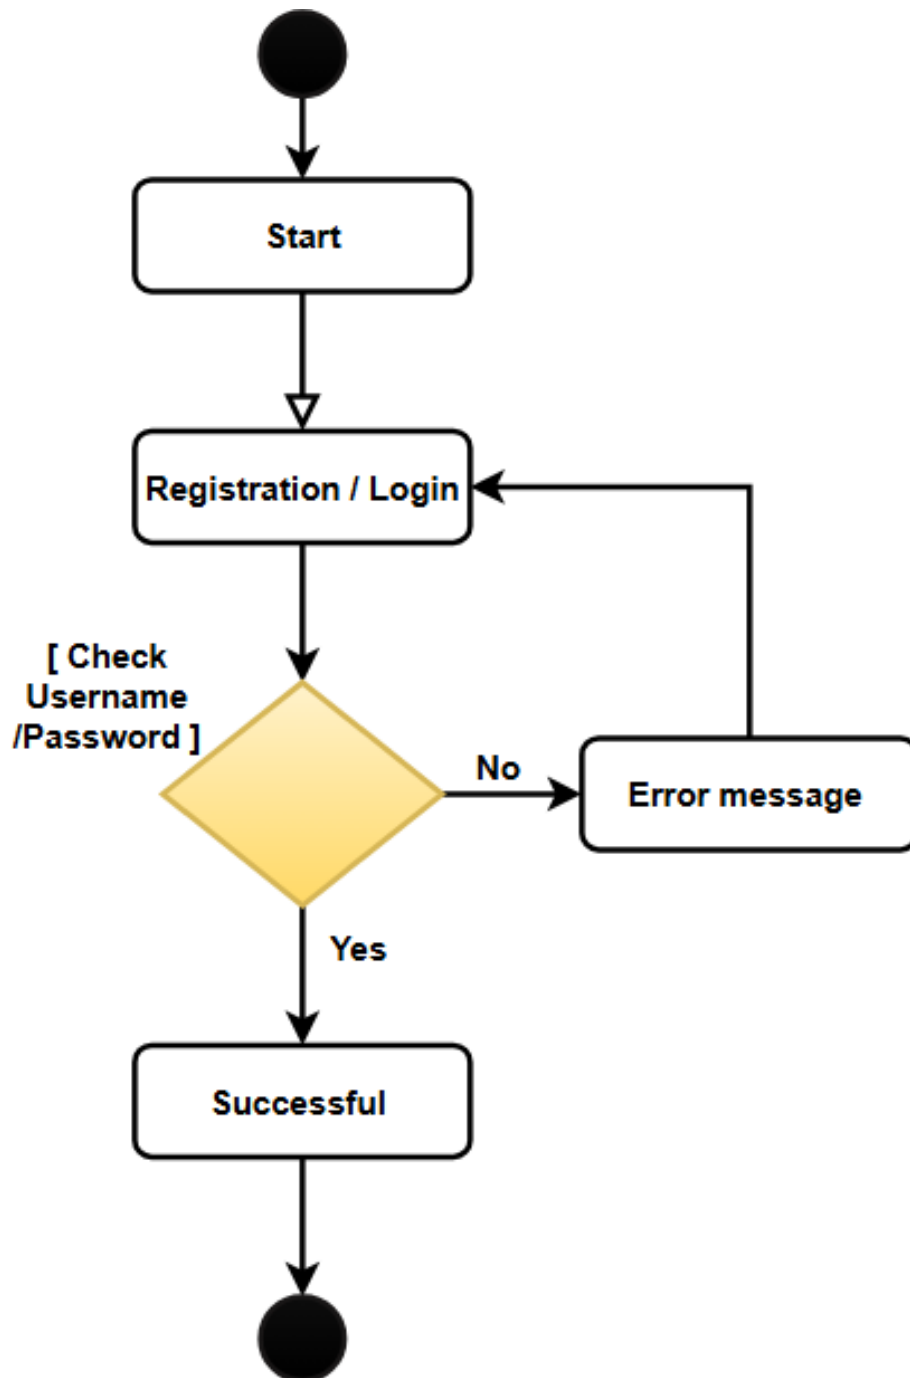

<<extends>> : Use <<include>> when a use case **always performs another use case as part of its process.**

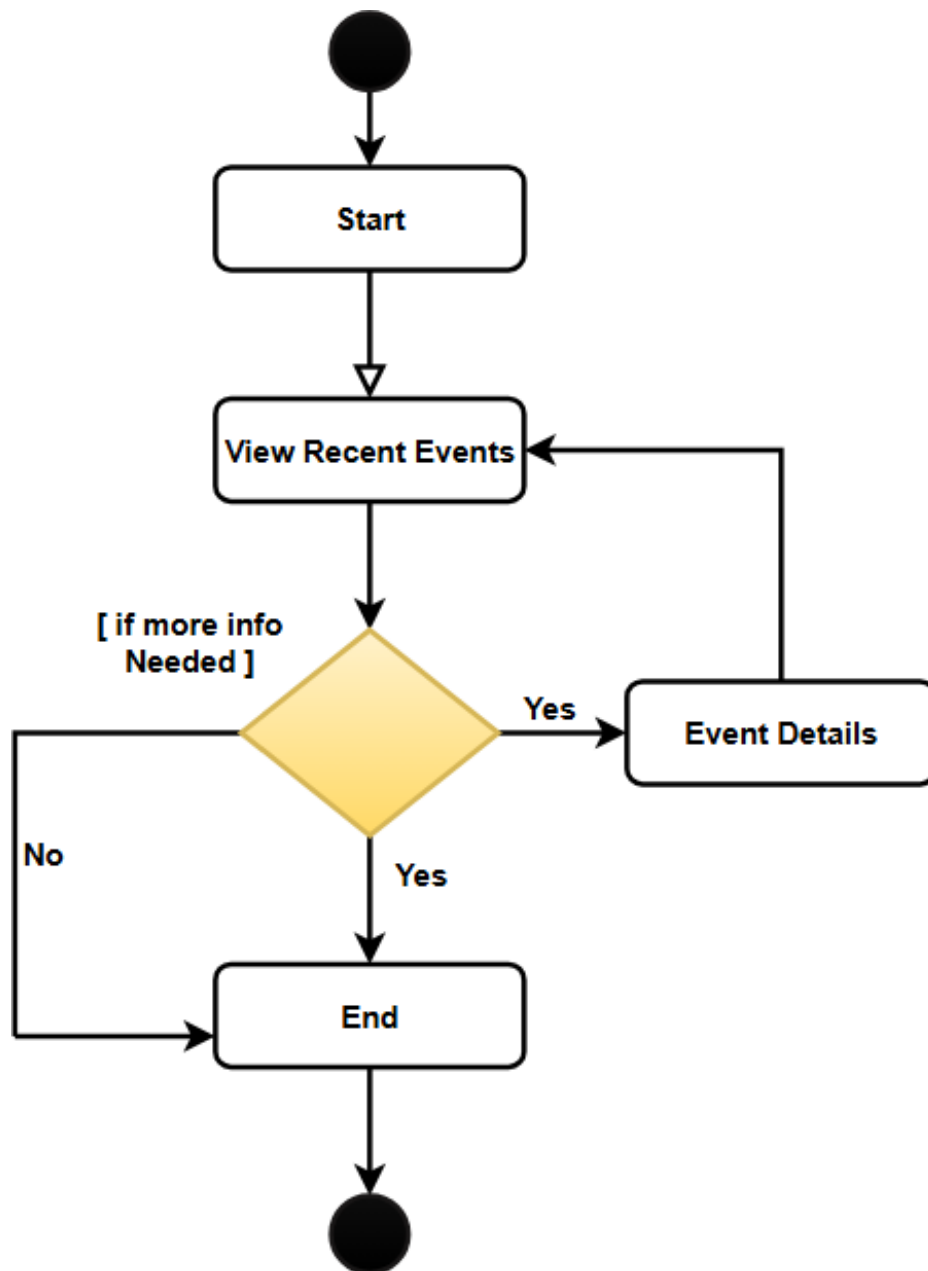

- Admin View Packages
- Admin View Events
- Admin View User
- Admin manage Events
- Admin manage Packages

3.2 Activity Diagram :

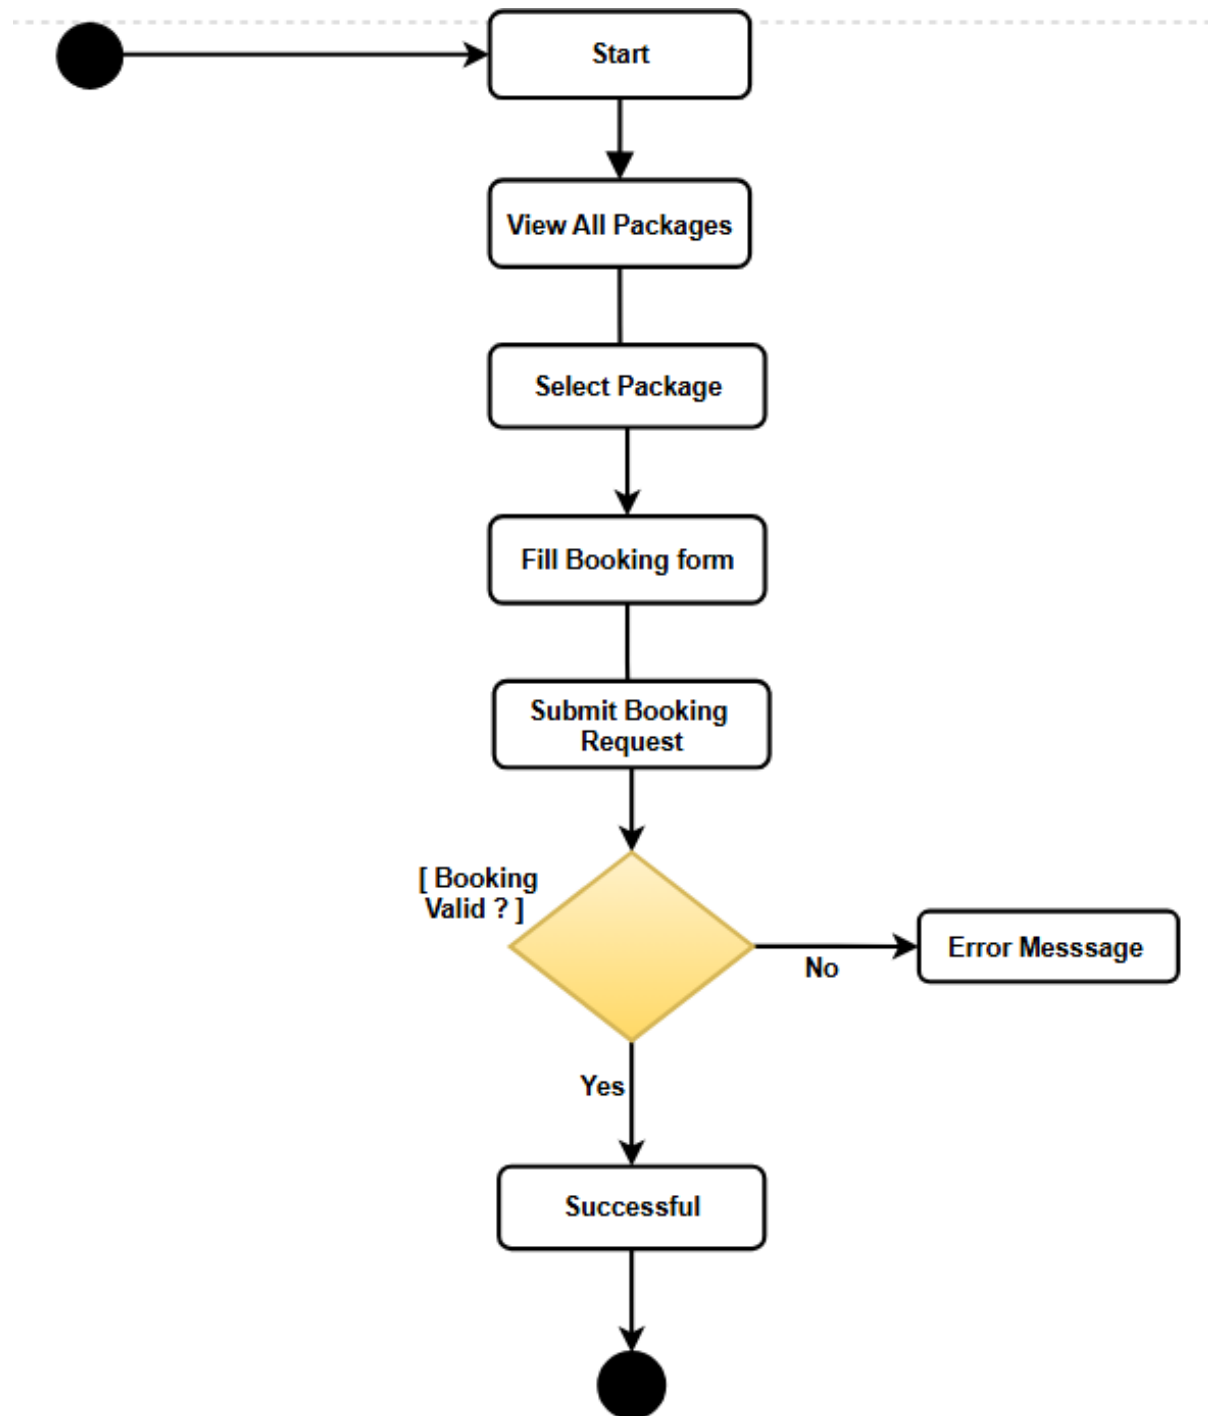

3.2.1 Activity Diagram for Login / Registration :

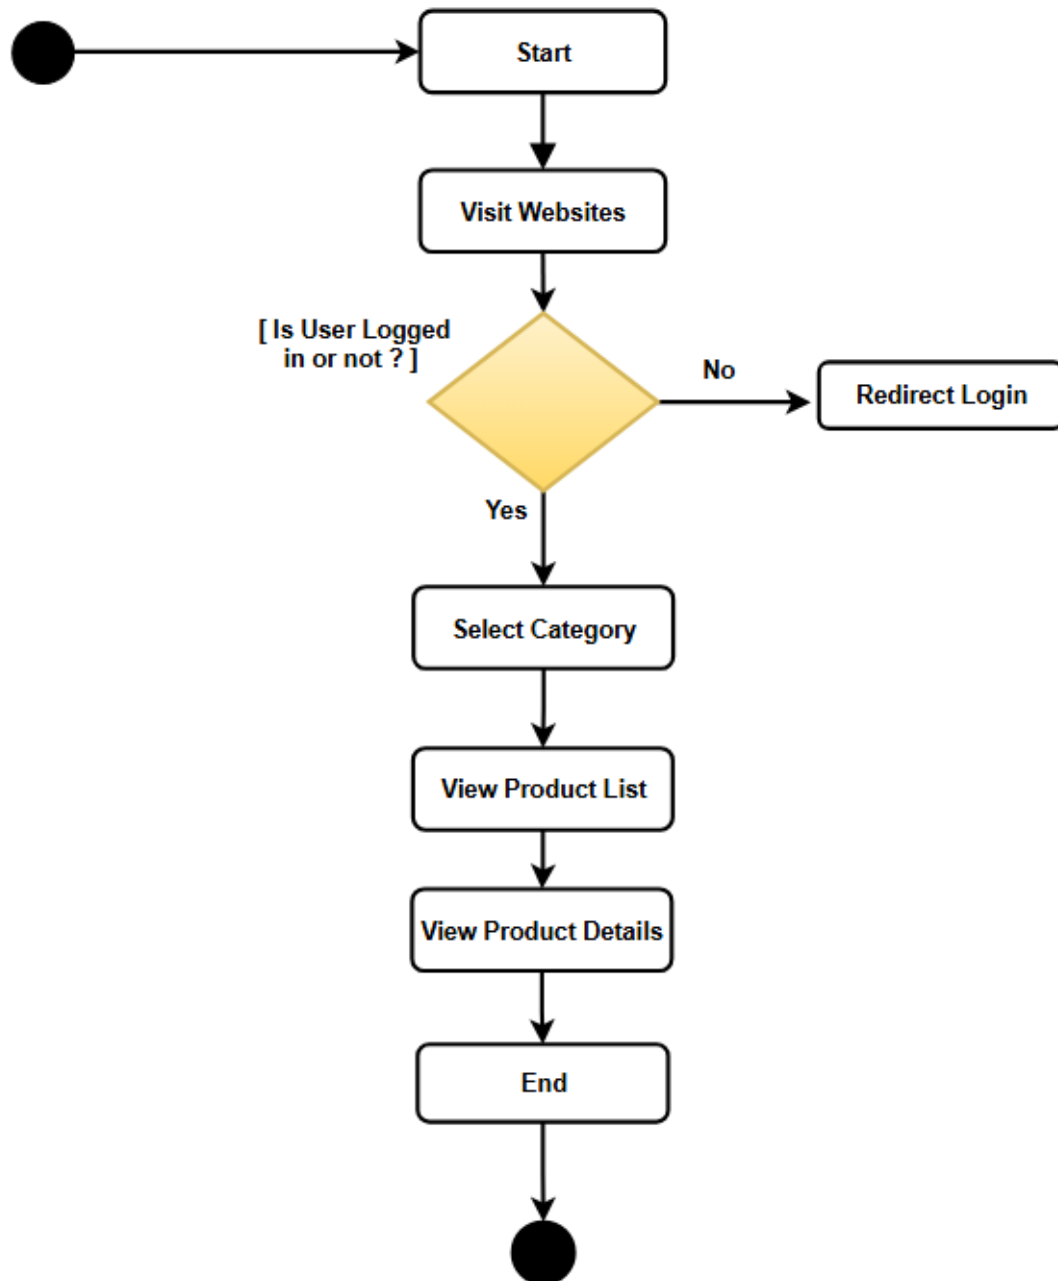

3.2.2 Activity Diagram of Browsing Package :

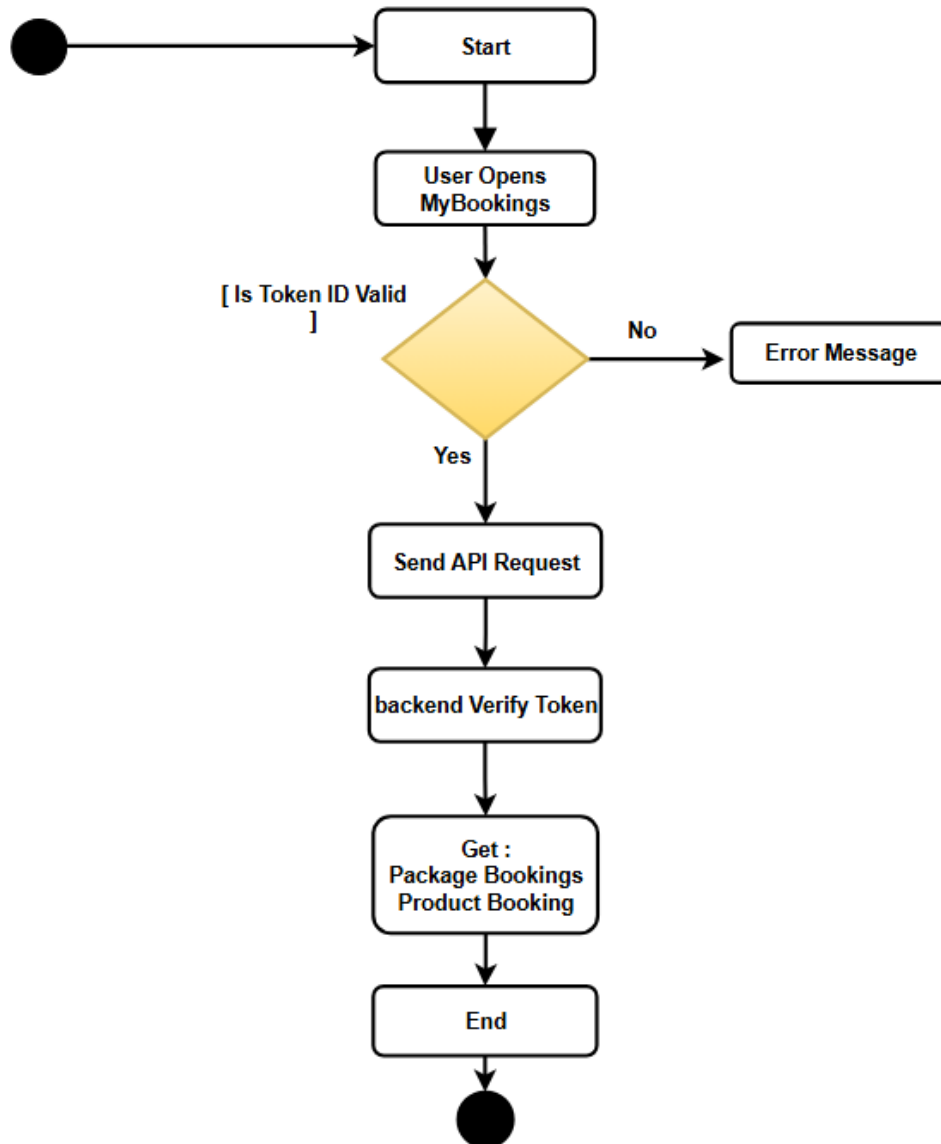

3.3.3 Activity Diagram of Booking Package :

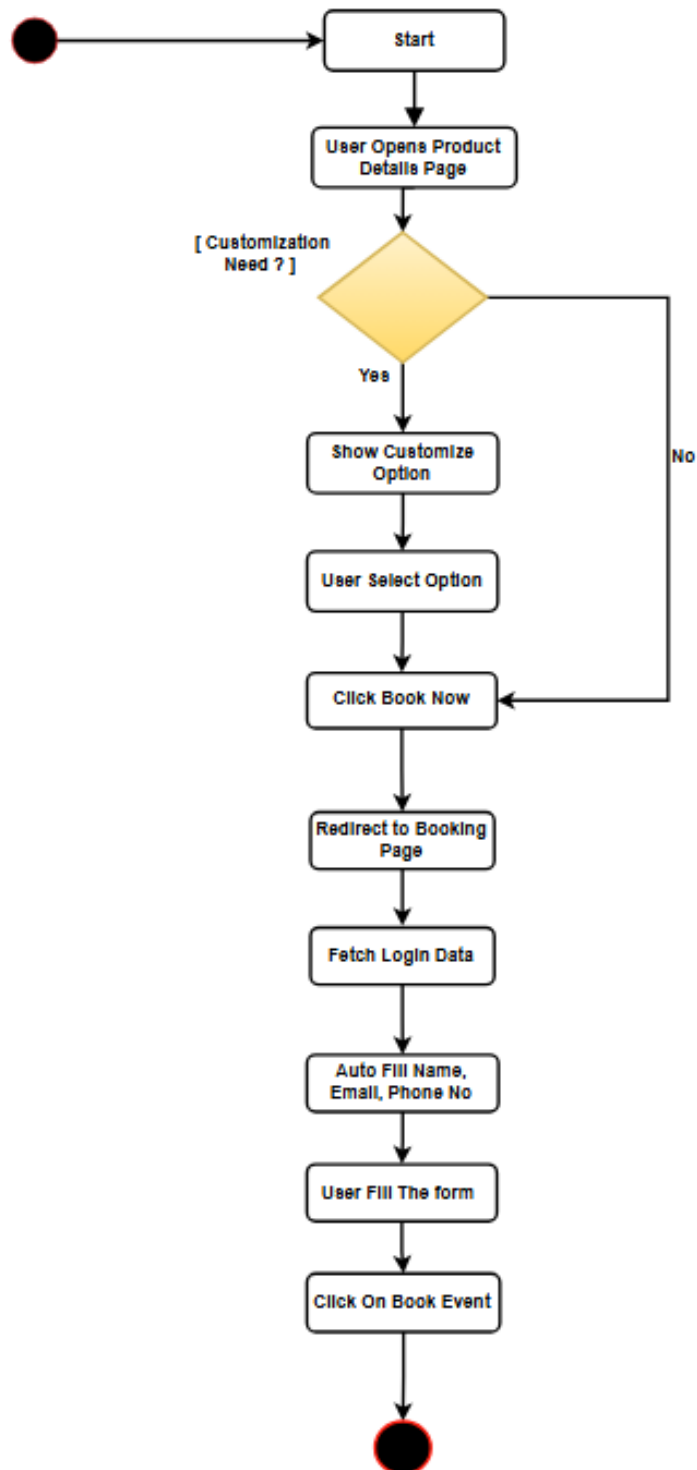

3.3.4 Custom Product :

3.3.5 Booking Flow :

3.4.6 Product Booking Flow :

CHAPTER 4 — SYSTEM DESIGN

4.1 Database Design :

4.1.1 Event Collection

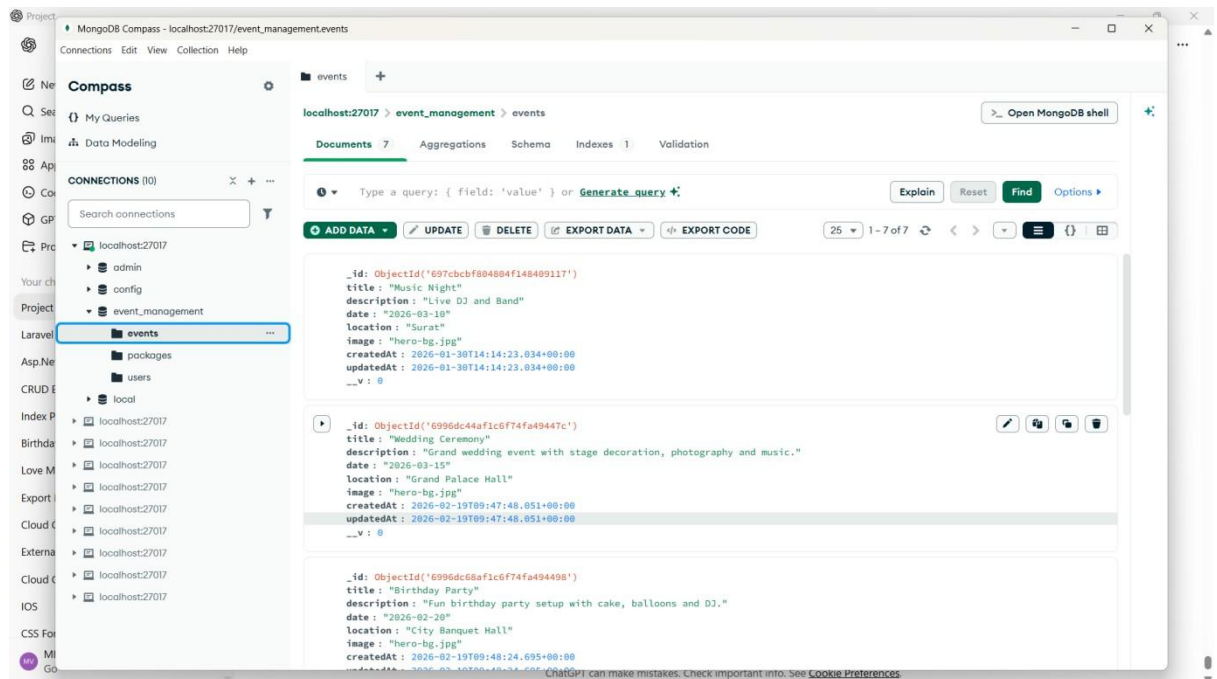

Field	Field Type	Constraints	Description
id	ObjectId	Primary Key, Auto-generated	Unique identifier for each event document.
title	String	Required, Not Null	Stores the name or title of the event.
description	String	Required	Provides details about the event.
date	Date	Required	Stores the date on which the event will take place.
location	String	Required	Stores the venue or location of the event.
image	String	Optional	Stores the image file name or URL related to the event.
createdAt	Date	Default: Current Date	Records the date and time when the event was created.
updatedAt	Date	Auto Updated	Records the date and time when the event details were last updated.

MongoDB Design Approach

- Document-based storage
- Flexible schema

Event Management System

Event Collection :

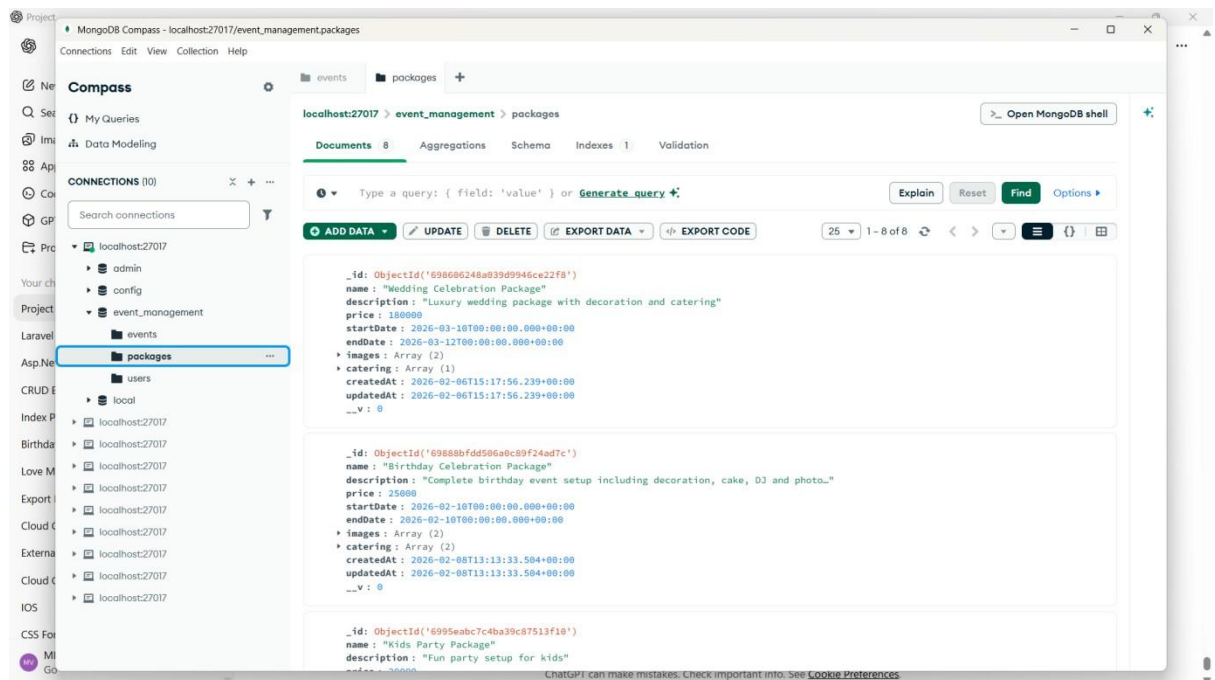

4.1.2 Package Collection :

Field	Fild type	Constreint	Description
id	ObjectId	Primary Key, Auto-generated	Unique identifier for each package document.
name	String	Required, Not Null	Stores the name of the event package.
description	String	Required	Provides details about the services included in the package.
price	Number (Integer)	Required, Minimum Value	Stores the cost of the event package.
startDate	Date	Required	Indicates the starting date of the package availability.
endDate	Date	Required	Indicates the ending date of the package availability.
images	Array	Optional	Stores image URLs or file paths related to the package.
catrering	Array	Optional	Stores catering items or food services included in the package.
createdAt	Date	Default: Current Date	Records the date and time when the package was created.
updatedAt	Date	Auto Updated	Records the date and time when the package details were last updated.

Event Management System

Package Collection :

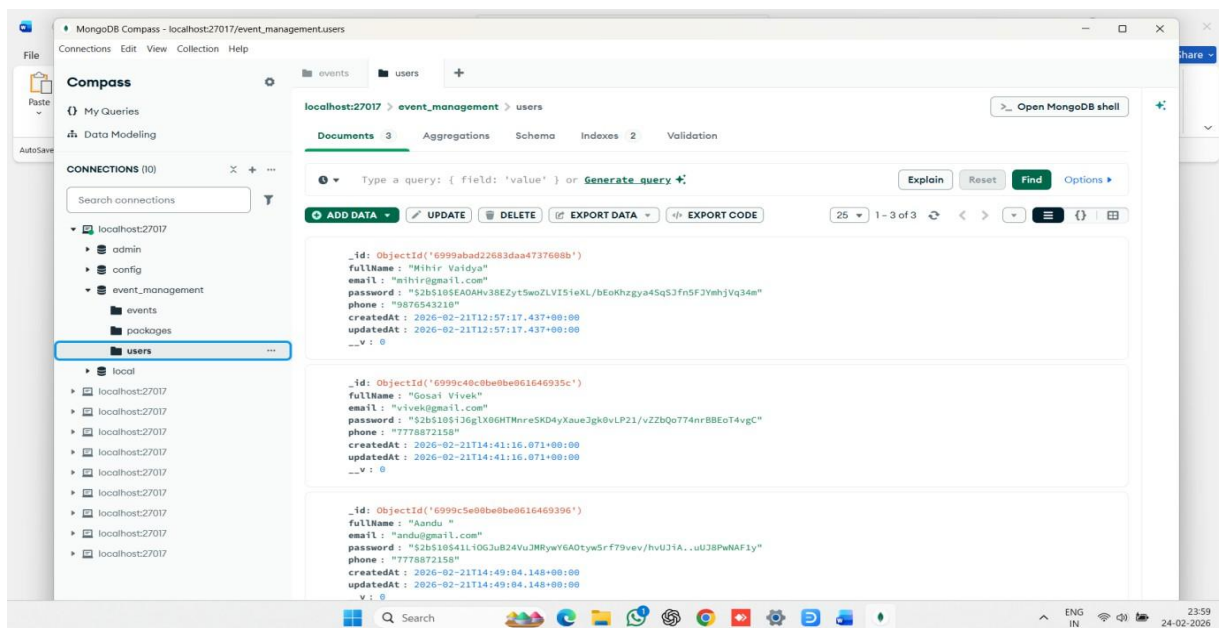

Event Management System

4.1.3. User Collection :

Field	Field type	Constraint	Description
Id	ObjectId	Primary Key, Auto-generated, Required	Unique identifier for each user document.
fullname	String	Required, Not Nul	Stores the full name of the user.
email	String	Required, Unique	Stores the user's email address used for login and communication.
password	String	Required	Stores the encrypted/hashed password of the user.
phone	String	Required	Stores the user's contact phone number.
createdAt	Date	Default: Current Date	Records the date and time when the user account was created.
updatedAt	Date	Auto Updated	Records the date and time when the user information was last updated.

User Collection :

4.1.4 Bookings Collection:

Field	Field type	Constraint	Description
_id	ObjectId	Primary Key, Auto-generated, Required	Uniqueidentifier for each booking document.
userId	ObjectId	Required, Foreign Key (References Users Collection)	Stores the unique ID of the user who made the booking.
userName	String	Required	Stores the full name of the user who made the booking.
email	String	Required	Stores the email address of the user for booking communication and confirmation.
packageId	ObjectId	Required, Foreign Key (References Packages Collection)	Stores the unique ID of the selected event package.
startingDate	Date	Required	Stores the booking start date of the event.
endingDate	Date	Required	Stores the booking end date of the event.
location	String	Required	Stores the event location selected by the user.
phoneNumber	String	Required	Stores the contact number of the user for communication.
guestCount	Number	Required, Minimum Value: 1	Stores the number of guests attending the event.
specialRequest	String	Optional / Default: ""	Stores any additional special requests or notes provided by the user.
createdAt	Date	Default: Current Date	Records the date and time when the

Event Management System

			booking was created.
updatedAt	Date	Auto Updated	Records the date and time when the booking information was last updated.
__v	Number	Default: 0, Auto-generated by Mongoose	Internal version key used by Mongoose for document versioning.

The screenshot shows the MongoDB Compass application interface. The left sidebar displays the 'Connections' list with 'localhost:27017' selected. The 'Database Explorer' on the left shows the 'event_management' database with collections including 'bookings', 'categories', 'events', 'packages', 'productbookings', 'products', and 'users'. The 'bookings' collection is selected, and the 'Documents' tab is active. The main panel displays two documents from the 'bookings' collection. The first document has fields: _id, userId, username, email, packageId, startDate, endDate, location, phoneNumber, guestCount, specialRequest, createdAt, updatedAt, and __v. The second document has similar fields with different values. The bottom status bar shows the system clock as 19:09 on 07-04-2026.

Event Management System

4.1.5 Categories Collection:

Field	Field type	Constraint	Description
_id	ObjectId	Primary Key, Auto-generated, Required	Unique identifier for each category document.
name	String	Required, Unique	Stores the name of the event category (e.g., Mandap, Reception, Birthday Party, Engagement).
image	String	Required	Stores the image file name or path associated with the category.
__v	Number	Default: 0, Auto-generated by Mongoose	Internal version key used by Mongoose for document versioning.

4.1.6 ProductBookings Collection:

<i>Field</i>	<i>Field type</i>	<i>Constraint</i>	<i>Description</i>
_id	ObjectId	Primary Key, Auto-generated, Required	Unique identifier for each product booking document.
userId	ObjectId	Optional / Foreign Key (References Users Collection)	Stores the unique ID of the user who made the product booking.
userName	String	Required	Stores the name of the user who booked the product.
email	String	Required	Stores the email address of the user for booking communication.
phoneNumber	String	Required	Stores the contact number of the user.
productId	ObjectId	Required, Foreign Key (References Products Collection)	Stores the unique ID of the selected product.
productName	String	Required	Stores the name of the booked product.
price	Number	Optional / Required (if stored)	Stores the price of the selected product at the time of booking.
customizations	Object	Optional	Stores customization details selected by the user for the product booking.
date	Date / String	Required	Stores the booking or event date for the product.
location	String	Required	Stores the event or delivery location for the booked product.
guestCount	Number	Required	Stores the number of guests related to the product booking.
specialRequest	String	Optional / Default: ""	Stores any additional requests or notes from the user.

Event Management System

createdAt	Date	Default: Current Date	Records the date and time when the product booking was created.
updatedAt	Date	Auto Updated	Records the date and time when the product booking was last updated.
__v	Number	Default: 0, Auto-generated by Mongoose	Internal version key used by Mongoose for document versioning.

The screenshot shows the MongoDB Compass interface. The left sidebar displays the database structure with 'event_management' selected, and 'productbookings' highlighted under the 'collections' folder. The main panel shows the 'Documents' tab for the 'productbookings' collection. Two documents are visible:

Registered Users
Admin can view all registered users from the user side

Name	Email	Role	Status
Rahul Patel	rahul@example.com	Customer	Active
Sneha Shah	sneha@example.com	Organizer	Active
Karan Mehta	karan@example.com	Customer	Pending
Priya Desai	priya@example.com	Vendor	Blocked

4.3.13 Add Events:

The screenshot displays the 'Events Management' section of the admin panel. The left sidebar contains navigation links: Dashboard, Users, Events (highlighted), Packages, Bookings, Vendors, Payments, Reviews, and Reports. The main content area has a header 'Events Management' with a search bar and a notification bell. Below this is the 'Add New Event' form, which includes fields for Event Name, Category, Date (dd-mm-yyyy), Location, and a large text area for Event Description. An 'Add Event' button is at the bottom of the form. Below the form is a section titled 'All Events' with a table header: Event Name, Category, Date, Location, and Status. The browser's address bar shows 'localhost:5173/admin/events'.

4.3.14 Add Packages:

The screenshot displays the 'Packages Management' section of the admin panel. The left sidebar contains navigation links: Dashboard, Users, Events, Packages (highlighted), Bookings, Vendors, Payments, Reviews, and Reports. The main content area has a header 'Packages Management' with a search bar and a notification bell. Below this is the 'Add New Package' form, which includes fields for Package Name, Price, Suitable For, and a dropdown for Select Status. There is also a large text area for Package Description. An 'Add Package' button is at the bottom of the form. Below the form is a section titled 'Event Packages' with a table header: Package Name, Price, Best For, and Status. The browser's address bar shows 'localhost:5173/admin/packages'.

CHAPTER 5 – Future scope :

◆ Payment Integration

- Integrate online payment gateways like Razorpay / Stripe / PayPal
- Allow users to pay booking amount securely
- Generate payment receipts automatically

◆ Mobile Application

- Develop an Android/iOS mobile app
- Provide better user experience and accessibility
- Enable push notifications for bookings and updates

◆ Real-time Notifications

- Send SMS / Email confirmations after booking
- Notify users about booking status, reminders, and offers

◆ Admin Dashboard Enhancement

- Advanced analytics (revenue, bookings, user activity)
- Manage products, categories, and bookings efficiently

◆ Review & Rating System

- Users can give feedback on services/products
- Improve service quality based on ratings

◆ Live Availability Check

- Show available dates for products/packages
- Prevent double booking

◆ Chat Support System

- Add live chat between user and admin
- Improve customer support

◆ Multi-user Role System

- Add roles like Admin, Vendor, User
- Vendors can manage their own products/services

Chapter 6 - Learning During the Project Work

During the development of this project, several technical and practical skills were learned:

◆ Technical Learning

- Developed full-stack application using MERN Stack (MongoDB, Express, React, Node.js)
- Learned how to create and manage REST APIs
- Understood database design and schema modeling (MongoDB)
- Implemented authentication using JWT (JSON Web Token)
- Learned React Hooks (useState, useEffect, useNavigate, useParams)
- Handled frontend-backend integration using Axios
- Implemented dynamic UI with conditional rendering and state management

◆ Problem Solving Skills

- Debugged errors related to API, routing, and database
- Fixed issues like data not displaying, incorrect API calls, etc.
- Learned how to handle real-world project challenges

◆ Design & UI Skills

- Improved UI/UX using CSS
- Designed responsive pages for better user experience

◆ Project Management

- Understood how to structure a full project (frontend + backend)
- Learned step-by-step development approach
- Improved logical thinking and planning

◆ Real-world Understanding

- Gained knowledge of how event booking systems work
- Learned how customization and booking flows operate in real applications
